

Discrete Math Report Card Comments

Paul

Paul, your grade of 30% reflects a series of low test scores and exam. Lamentably, you have not achieved the credit for Discrete Math. Test 3 was one of your best units during this course. Your utilization of class time was often controvertible. You infrequently sought any guidance from me on your homework questions. You did not capitalize on opportunities to meet with me in the morning or after school, or peer tutors. I suggest that you retake the Discrete Math course and revise your study habits.

Paul has a weak understanding of topics pertaining to this course. I suggest Paul to seek for more information. Homework needs to be consummated everyday, and follow up with the edifier on concepts you do not understand. You will be surprised how much more facile the course material will become if you consistently do this.
